

DAS

CASE STUDY

TRADING AND FINANCIAL 

EA knew they needed a workstation solution that could not only support their diverse and challenging tech requirements but also be mobile enough to reconfigure the space if and when needed.

After previously attempting to find an appropriate solution with other manufacturers, EA found that DAS were the only experts able to customise products to fit their exacting requirements.

With that in mind DAS provided 199no custom DATUM Flux+ electrically height adjustable Engineer's workstations and 252no 'back-office' workstations across EA's Guildford HQ.

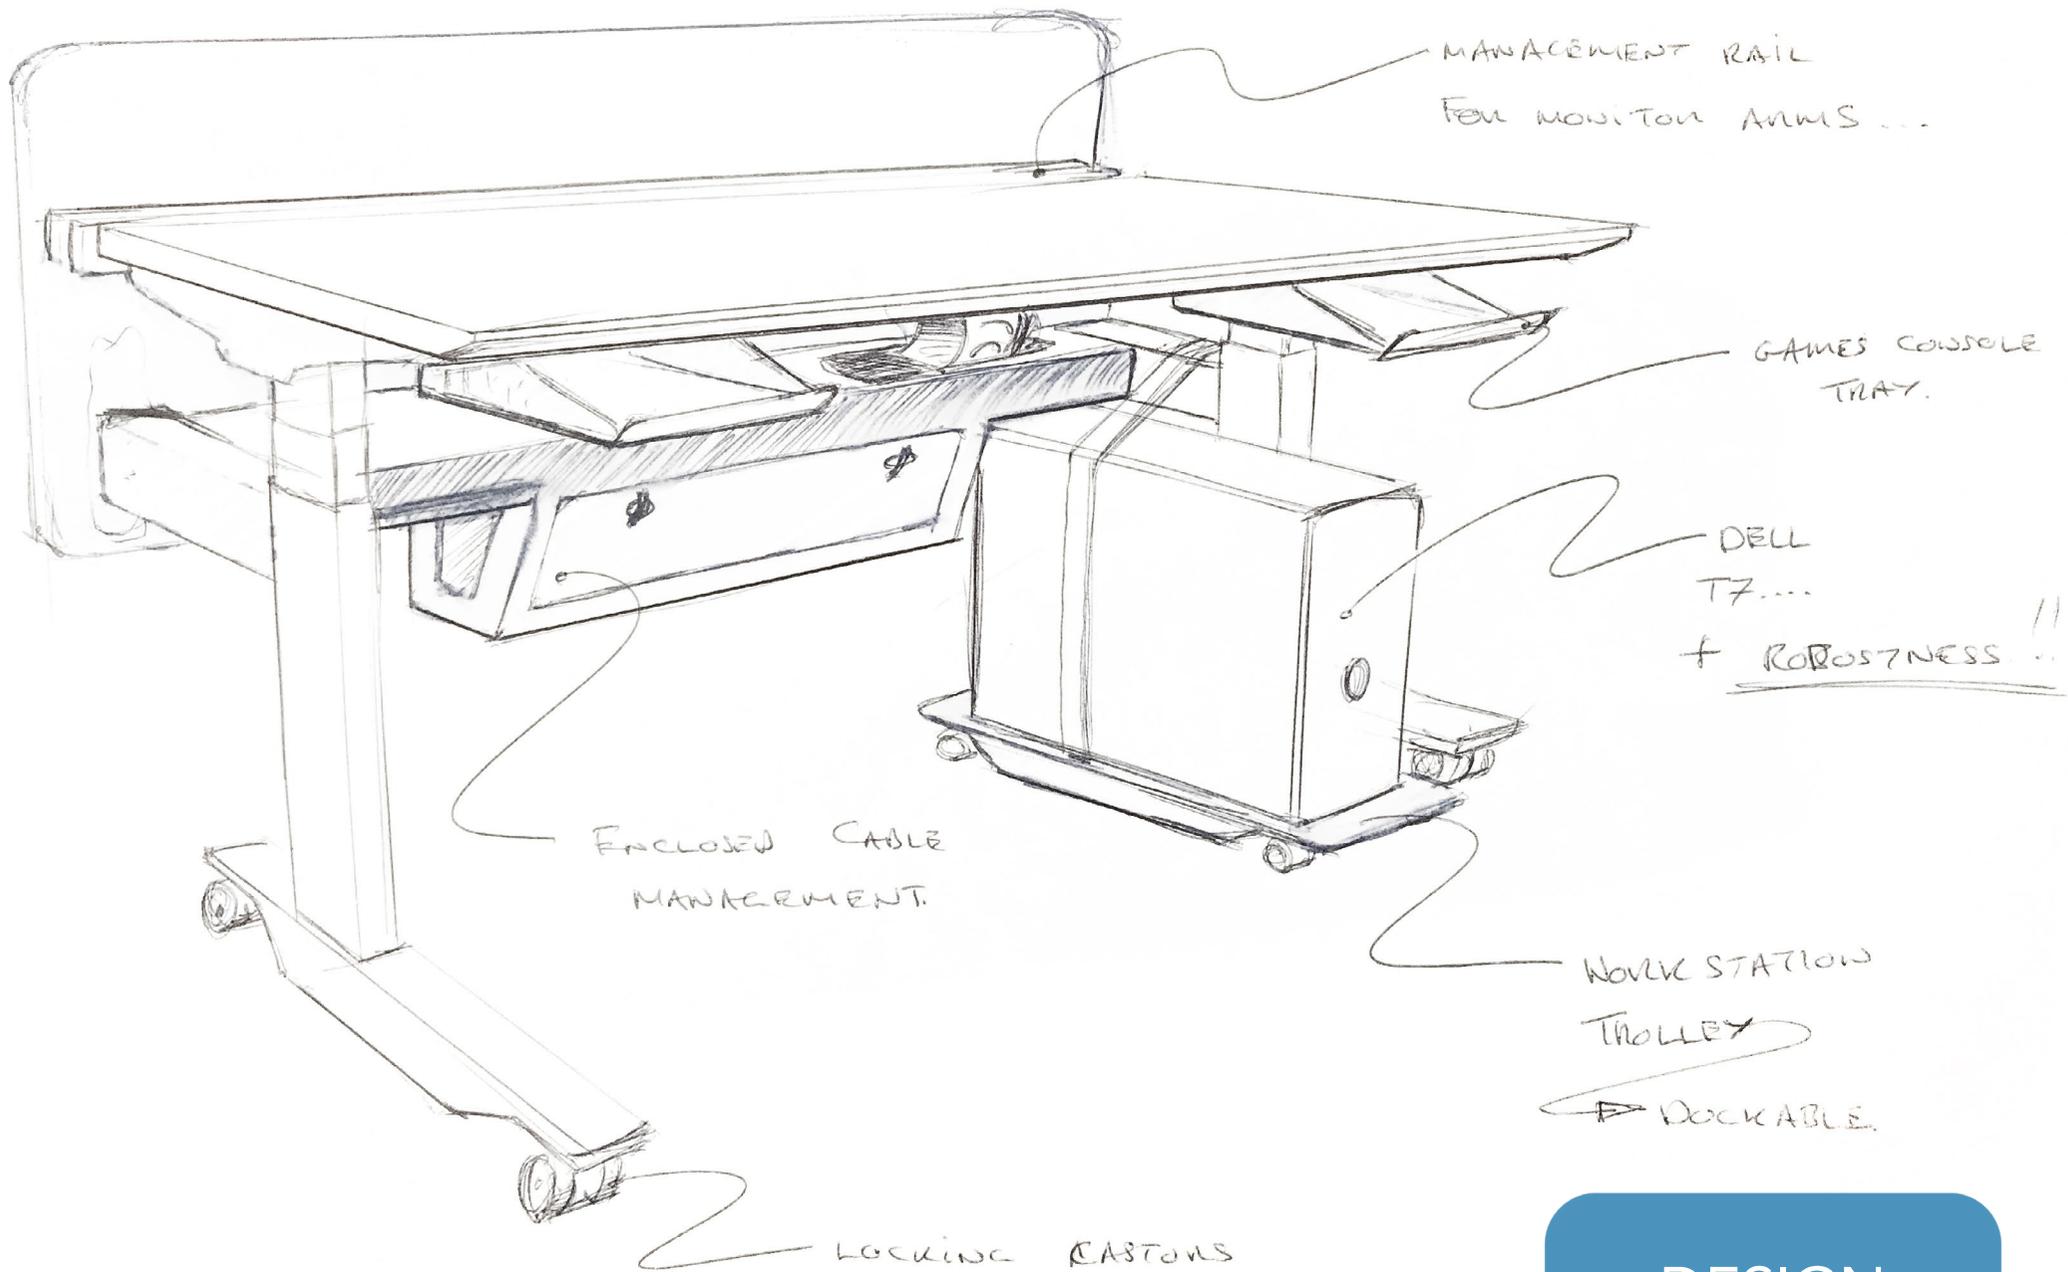

Different finishes and configurations have been provided across the various departments at EA.

Depending on the type of work carried out in any given area, the DATUM Flux+ desks are set up to be as efficient and practical as possible.

EA needed workstations that could accommodate a varied and extensive range of hardware. Be it custom sledges for large CPUs or bespoke trays beneath the workstation, DAS worked closely with the client to provide the perfect solution.

LOCKING CASTORS

DESIGN
CONCEPT

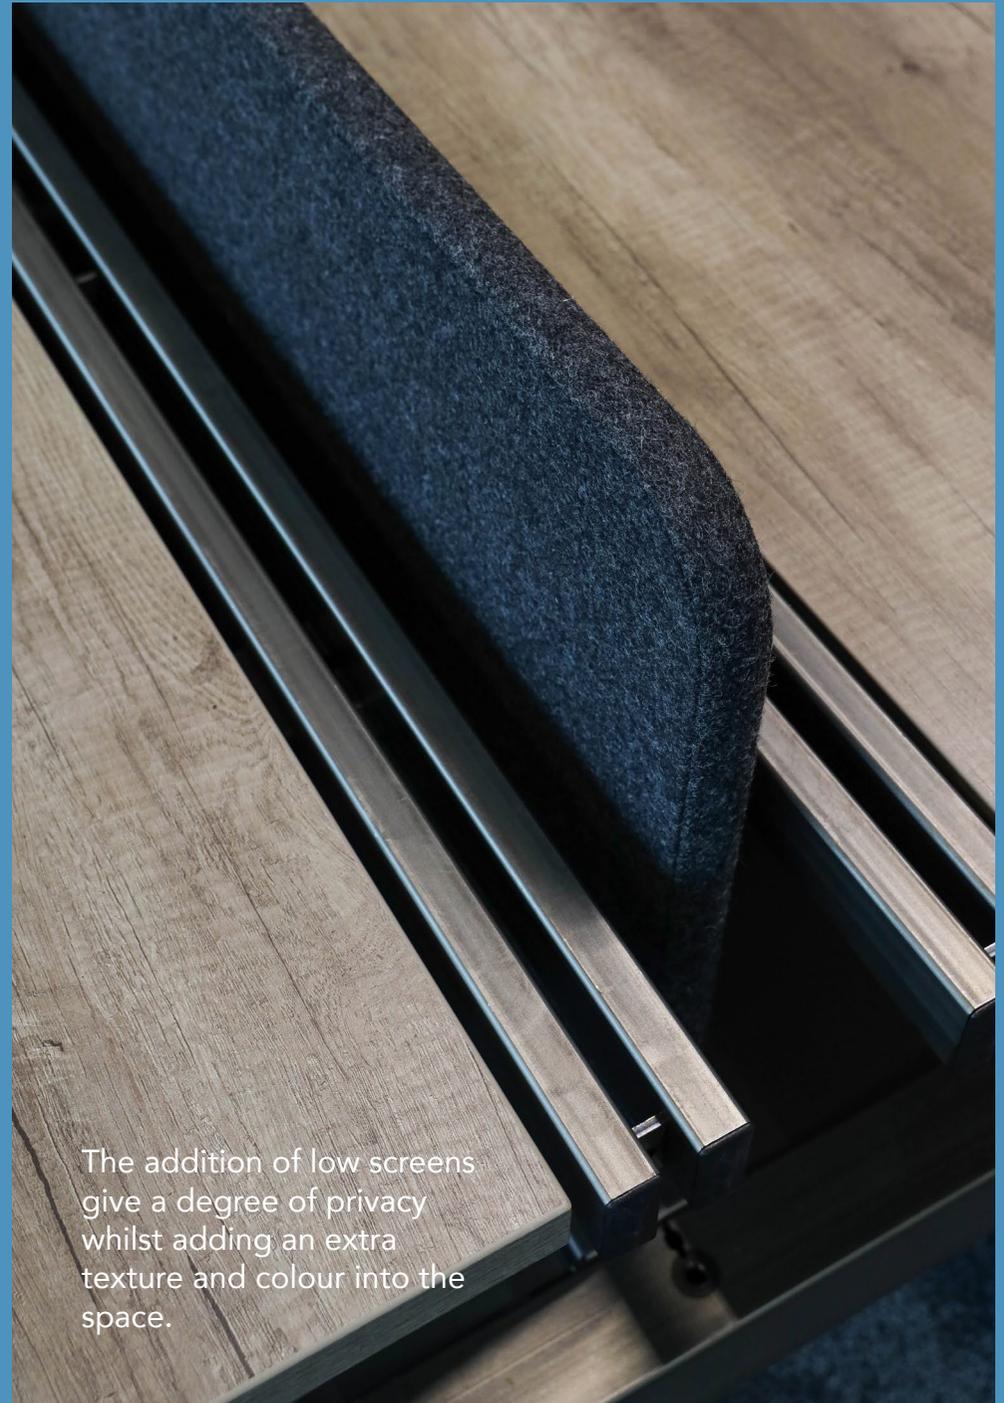

Custom castors added to DATUM foot to enable desks to be mobile across the office space.

Chamfered edge details on workstation tops help to create a slim, contemporary feel across the interior.

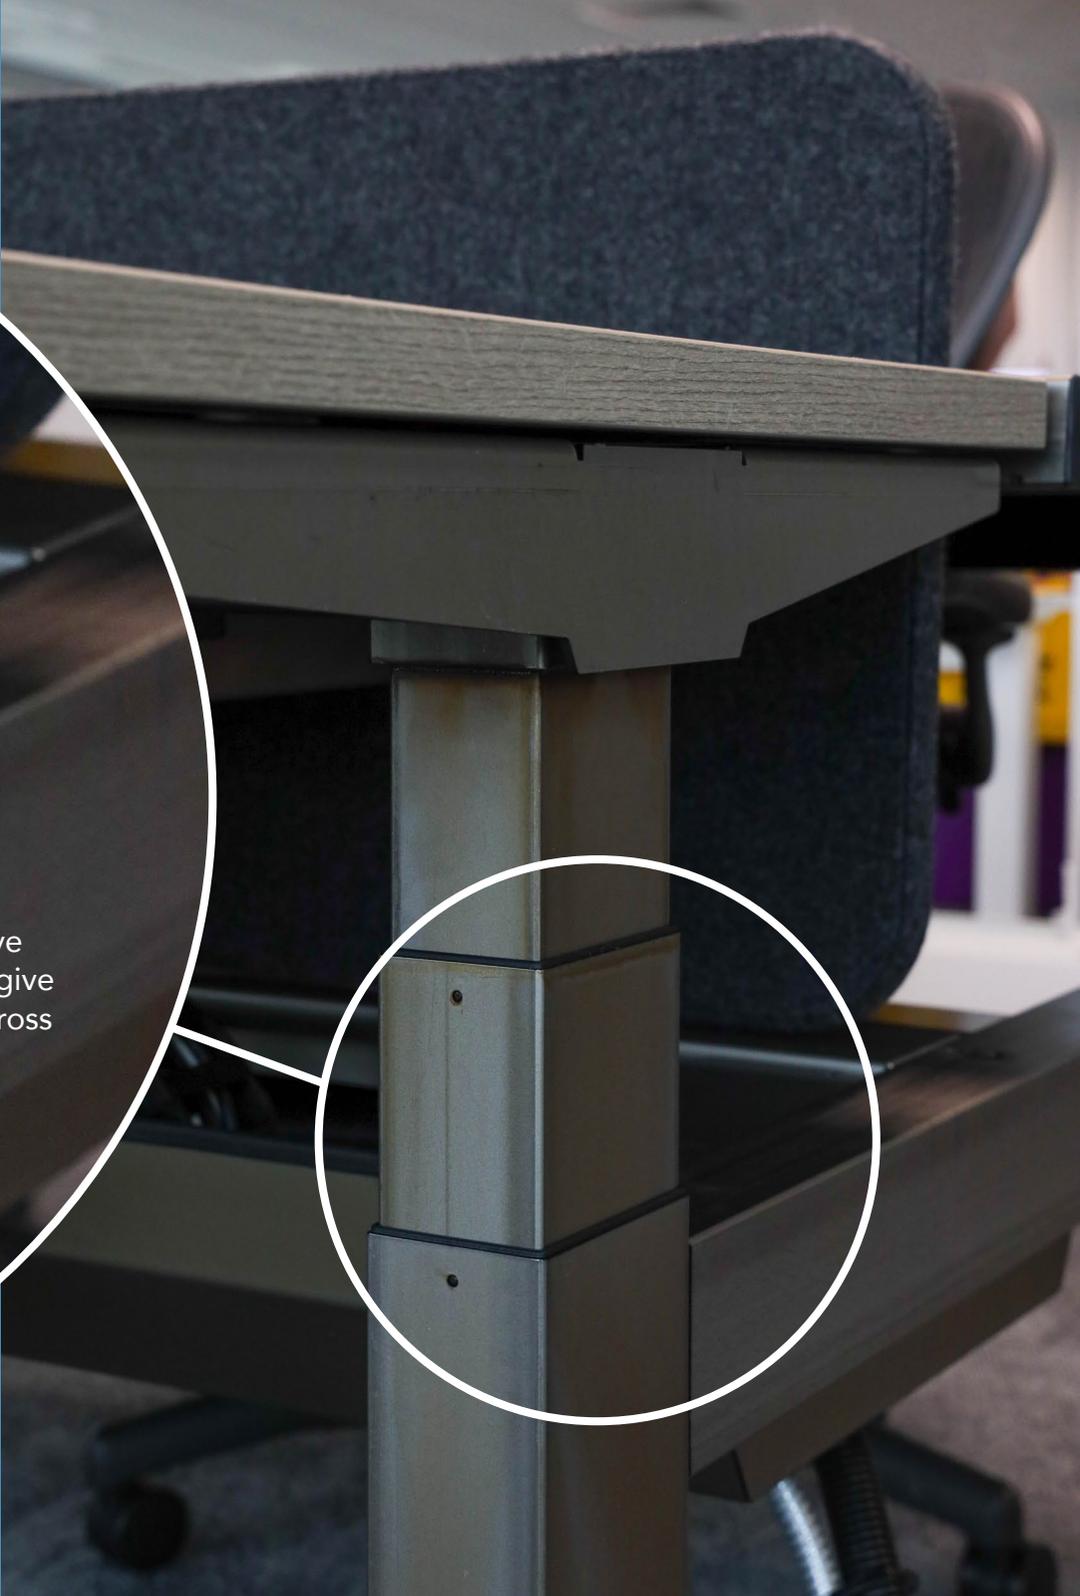

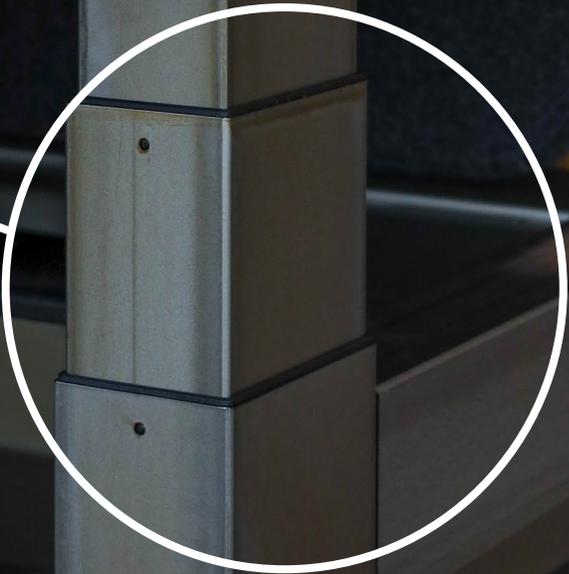

The addition of low screens give a degree of privacy whilst adding an extra texture and colour into the space.

Special raw finishes have been chosen by EA to give a different aesthetic across multiple departments.

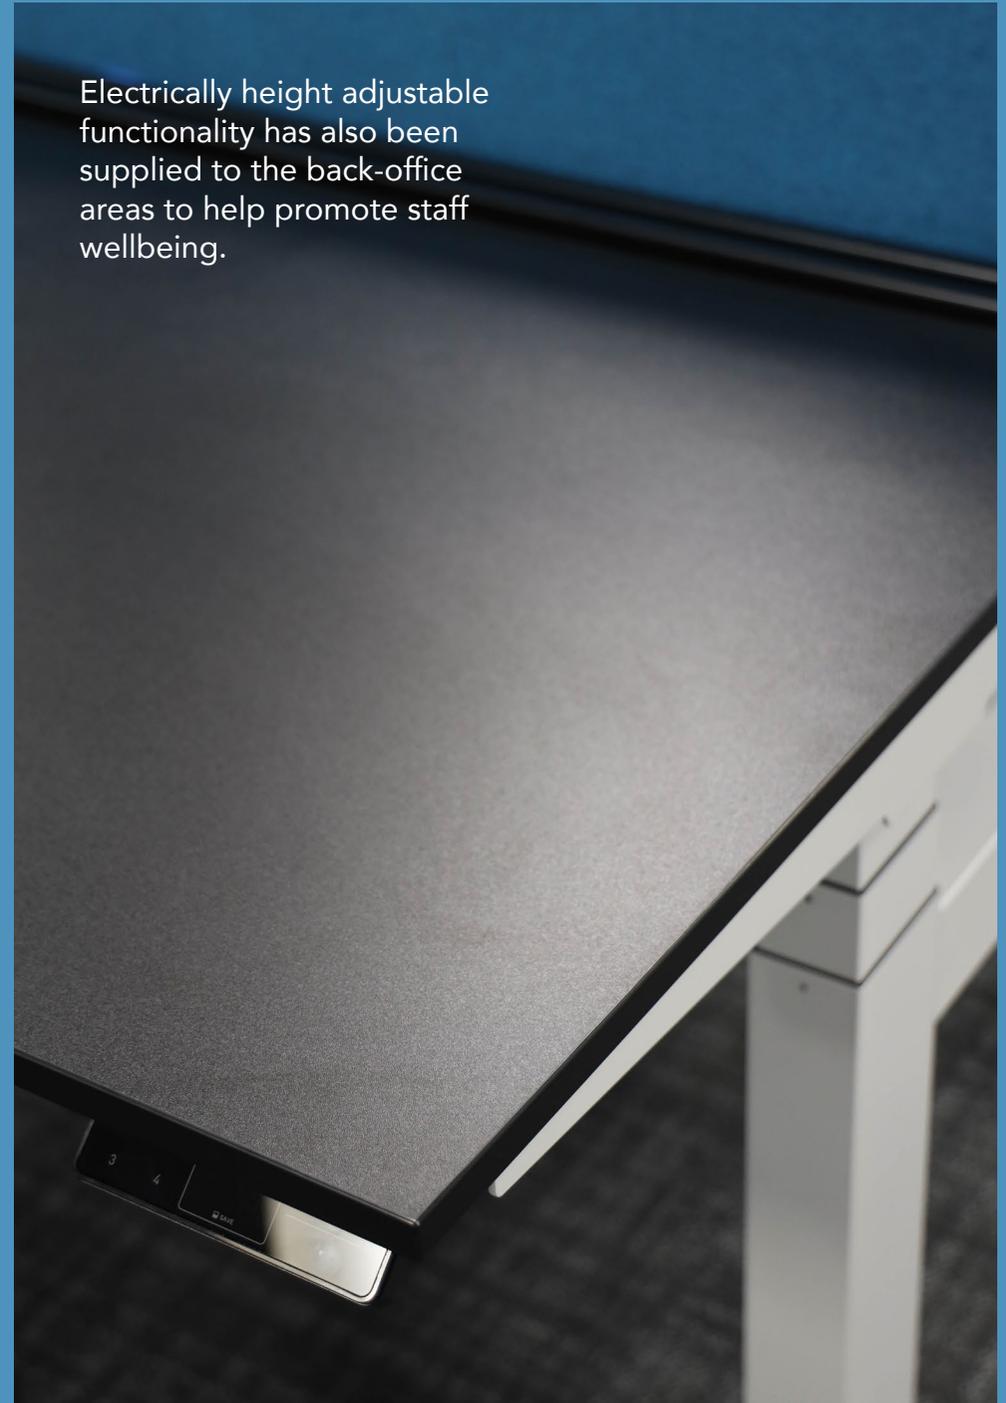

Height adjustable control units have been fitted to each workstation to allow for comfortable and varied use, no matter the user.

Clean and simple, black and white finishes have been chosen in the back-office areas.

Electrically height adjustable functionality has also been supplied to the back-office areas to help promote staff wellbeing.
